The Francis Galton Eugenics Laboratory.

This Laboratory was founded by Sir FRANCIS GALTON and is under the direction of Professor KARL PEARSON, F.R.S.

National Eugenics is the study of agencies under social control, that may improve or impair the racial qualities of future generations, either physically or mentally.

Assistant Director: DAVID HERON, M.A., D.Sc. Galton Research Fellow: ETHEL M. ELDERTON. Assistant: AMY BARRINGTON. Hon. Sec.: H. GERTRUDE JONES.

It was the intention of the Founder, that the Laboratory should serve (i) as a storehouse of statistical material bearing on the mental and physical conditions in man, and on the relation of these conditions to inheritance and environment; (ii) as a centre for the publication or other form of distribution of information concerning National Eugenics; (iii) as a school for training and assisting research-workers in the special problems of National Eugenics.

Short courses are provided for those who are engaged in social, medical or anthropometric work.

The Biometric Laboratory.

This Laboratory was established to forward the statistical study of Biological Problems.

Until the phenomena of any branch of knowledge have been subjected to measurement and number, it

CORRIGENDA TO ATLAS, PART IV

PLATE VI, Fig. 30. Delete footnote to this figure as erroneous.

PLATE XIII, Fig. 83: *for* No consanguinity recorded *read* No consanguinity.

PLATE XIII, Fig. 94. II. 3 should have been only half-black as an incomplete albino.

PLATE XV, Fig. 100. Transpose V.11 and V.12, the former the albino is the younger. II.13 should have been marked \otimes as deformed.

PLATE XVII, Fig. 117. III.1 should have been marked as an incomplete albino.

PLATE XVII, Fig. 122. III.6 should have been marked half-black as an incomplete albino.

PLATE XVIII, Fig. 132. IV. 8 should have been marked half-black as an incomplete albino.

PLATE XXII, Fig. 191: *for* No consanguinity recorded *read* No consanguinity.

PLATE XLVII, Fig. 551. This pedigree needs modifying in accordance with the corrections and additions made in our Text, Part I. p. 204.

EXTRA PEDIGREES. PLATE LV, Fig. A. II. 8 should not be described as 2nd W.

PLATE LV, Fig. B. Delete statement as to death of II. 4 and 5.

PLATE LV, Fig. C. III. 3 should not be marked as a doubtful incomplete albino, but as a normal.

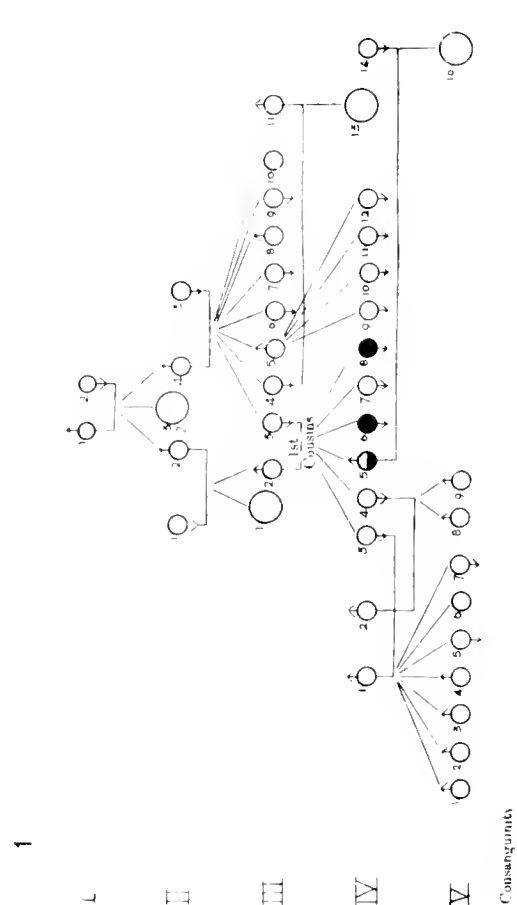

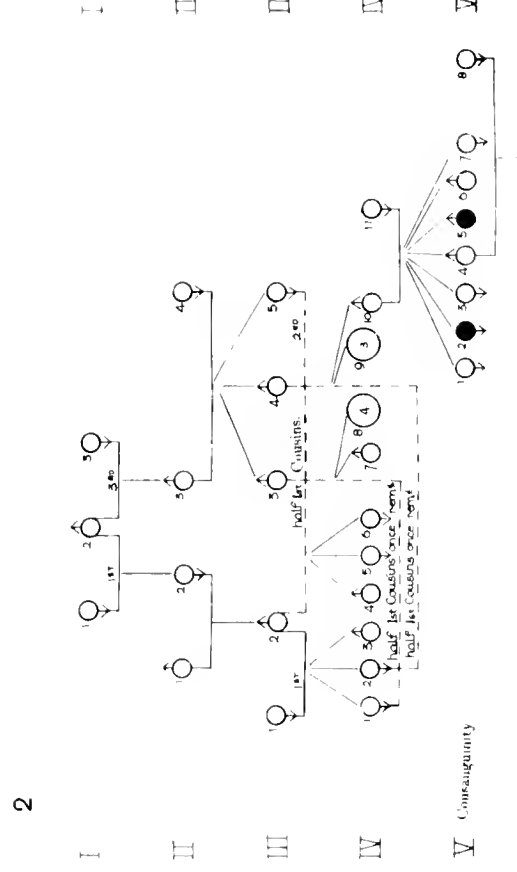

PLATE LV, Fig. E. II. 3 should have been marked as an incomplete, not complete albino.

PLATE LVI, Fig. O. IV. 8 should be \textcircled{p} , not \textcircled{q} . III.15 *a* should also represent two wives, not one, as III.15 was twice married, and IV.31—34 are the total offspring of the double marriage. V.56 should be marked as a blond. V.57 was herself an illegitimate child of IV.37 before the latter's marriage, and the word *illeg.* below V.57 refers to her birth and not to that of her children.

PLATE LVI, Fig. V. Delete \dagger below III.1 as she was still alive when pedigree was made and the draughtsman has placed the death sign here by mistake.

PLATE LVIII, Fig. W. The wife of IV. 2 should be IV. 2*a*, *a* has dropped out.

PLATE LVIII, Fig. X. The index figure II. 3 and the number 8 within the circle for the siblings of II. 2 have been omitted.
